

## **What will happen if I am infected with COVID-19?**

People may be sick with the virus for 1 to 14 days before showing symptoms. Symptoms may include: fever, fatigue, dry cough, shortness of breath, eye pain, sore throat, and loss of sense of smell. A single symptom does not indicate infection.

If you feel that you have symptoms please call your provider Monday through Friday or the ER provider on the weekend to discuss your symptoms and concerns. The provider will determine if you need to be seen, evaluated and/or tested.

If you are positive for COVID-19 and your symptoms are mild and manageable you WILL be expected to isolate yourself at home. \*There is no treatment for the virus at this time.\*

If you have acute respiratory distress you may require hospitalization. Persons requiring hospitalization for COVID-19 will be transferred to a facility capable of managing this illness. MGGH does not have the ability to hospitalize COVID-19 patients because of the specific requirements for isolation and specific equipment.

The staff at Mt. Grant General Hospital continue to be committed to providing care to our community. We are in constant contact with Nevada Division of Health to stay updated on testing and treatment. WE are happy to take calls to discuss your questions and concerns.

**WE ARE ALL IN THIS TOGETHER!**
